FSH Project

- Our groundbreaking ceremony on May 27th was well-attended and well-received by the hospital and the community
- Design and construction projects remain on time and within budget
- Much of the work currently involves demolition of old buildings and grading and leveling of the site in preparation for foundation work on the Energy Control Center (ECC) which will house dietary, warehousing, maintenance and information technology functions
- Substantial completion of the ECC is expected in May, 2016
- The architects are proceeding with construction drawings for the main hospital building, which will bid in February, 2016 with a December, 2017 completion date
