

LEARNING THE BASICS

CIMOR:

Overview:

The Customer Information Management, Outcomes, and Reporting system is the Department's initiative to replace current DMH central and facility information systems. CIMOR is more than a processing system. It allows DMH stakeholders better access to data with meaningful, accurate reports. It provides data for performance measurement and practice guidelines. And, it ensures better quality services for our customers.

CIMOR information can also be found on the Information Technology Services Division website at:
