

**Missouri Division of Developmental Disabilities  
Risk Screening Guide**

**Application:**

The Risk Screening Guide has been developed to assist with services and supports planning for individuals served through the Missouri Division of Developmental Disabilities (Division of DD). Division of DD Targeted Case Management, intake, or other staff as identified at Regional Offices, Senate Bill 40 (SB40) Boards, and other TCM provider agencies may use this guide to assist in identifying potential and/or actual individual risks in areas of health, personal and environmental safety, individual rights, socialization, and financial. Risk information ascertained from this guide and additional sources, including but not limited to, interviews, formal assessments, and record reviews, helps determine if the person is or may be experiencing any risk issues that can be prevented or mitigated through formal and/or informal supports. If potential and/or actual risk(s) are determined, the individual and his or her planning team should identify how the risk(s) are/will be addressed in the Person-Centered Plan, supports, and services.

The format and content of this guide is based on a review of best practices risk planning measures utilized in other states. Risk items selected and thresholds established for this guide are also based on Division of DD quality systems data reviews.

The Risk Screening Guide contains risk items that are arranged under one of the following categories: Health, Mobility, Environment/Safety, Rights, Socialization, and Money.

In this guide there is a Threshold column. The service coordinator may identify each issue that applies to the person based on the threshold for that risk item.

- Even though the threshold may not be reached for a particular risk item, follow up to the risk item may still be needed.
- It may be determined that, even though the threshold was reached for a risk item, further action may not be needed due to supports/services already being in place for that risk.
- For some of the risk items there is an asterisk located in the Threshold column. The asterisk refers to one or more occurrences of the risk issue within the last 12 months for the individual to meet the threshold. However, this date range may vary on a case-by-case basis, and it may be determined that although the last occurrence of the risk may have been longer than 12 months ago, the risk item may still need to be addressed in support of the individual.

The Assessment/Reference column identifies specific items in the Support Intensity Scale, Health Inventory as part of the Health Identification and Planning System process, and/or the Missouri Critical Adaptive Behavior Inventory, that are related to various items in the Risk Screening Guide. Information from the Risk Screening Guide can assist the service coordinator, for example, in preparation for involvement in interviews and other information gathering processes as part of the individual's risk management planning, as applicable.

The last column in the grid below, where applicable, provides additional explanation and/or examples associated with areas where individuals might be at risk.
