## **Survey for System of Care-Communities for Early Signs and Symptoms Trainings**

The Department of Mental Health would like to expand specialized services for individuals experiencing early warning signs of psychosis. The following survey lists trainings that have been developed by agency personnel on the System of Care-Community for Early Signs and Symptoms (SOC-CESS) grant. These trainings provide education on supports and clinical interventions for youth and young adults who are at Clinical High Risk for psychosis.

By completing this [survey](#), it will help DMH assess the interest your agency has in receiving these free trainings. Please complete this survey by May 14th.
